

Slime

Ingredients:

- 1 cup of PVA glue
- 1 cup of water
- Green food colouring
- 4 level teaspoons of borax
- 1/2 cup of hot water

Instructions:

- 1) Combine the glue, the water, and the food colouring in a mixing bowl. Mix all three ingredients thoroughly.
- 2) Place the borax and the hot water into an empty jar. Screw on the lid and shake until the borax dissolves.
- 3) Add the borax mixture to the glue mixture. It will create thick clumps of slime where the two mix. Make sure your hands are clean, and then begin mixing and kneading the slime. After about five to ten minutes it'll be nice and gooey. For a slimier texture, knead in more water.
- 4) Be sure to store your slime in an airtight container to prevent it drying out. Have fun!
